

Residential Buffer: Foster

Location: South shore of the lake, mostly sunny with some shade on portions of the buffer.

Planting Date: 8/7/2009

Pre-planting, the turf grass has been sprayed.

The plants are ready to be planted.

Several of the planting team laying out the erosion control blanket.

All planted. Different plants are planted in between the rocks, the erosion control blanket and the wood mulch.

A big ***thank you!*** to all the volunteers who helped. It rained that day. We took a break during the rain and continued later until we were done.

These last three photos were taken in July of 2012, almost three years after planting.
